智能驅猴系統

C10 獼猴要走對不隊

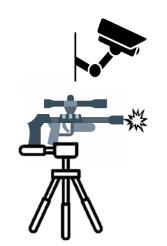

組員:

許銘森

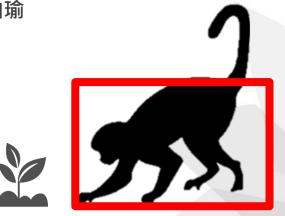

王奕翔

陳宇銓

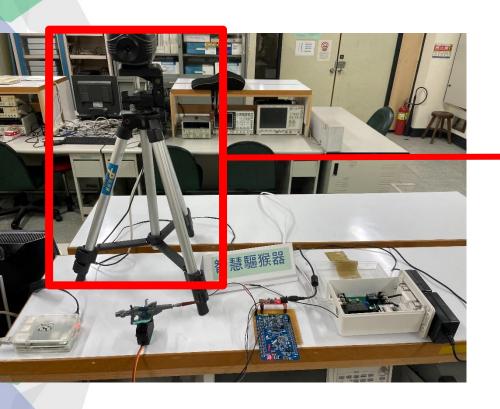

賴柏瑜

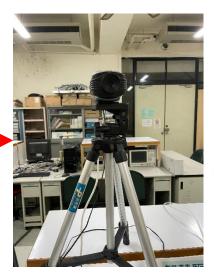

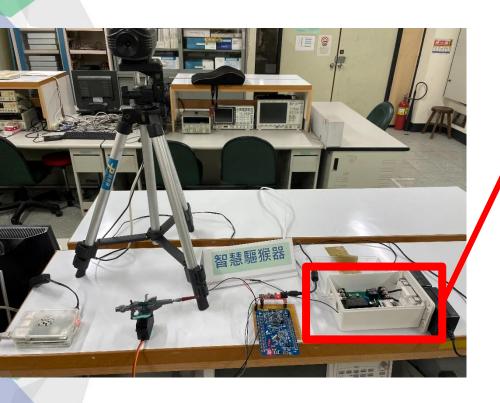

日期:2021/7/18

網路監控攝影機功能:

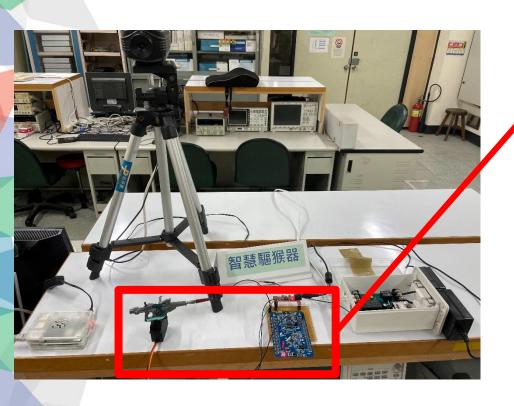

抓取影像

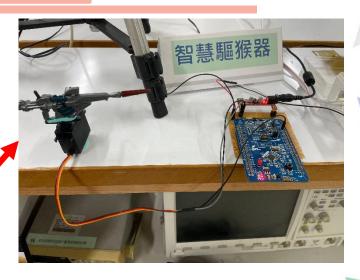

MQTT物聯網插座 功能:

電流管理 接收(subscribe)指令封包 Wifi無線連網 Modbus Master

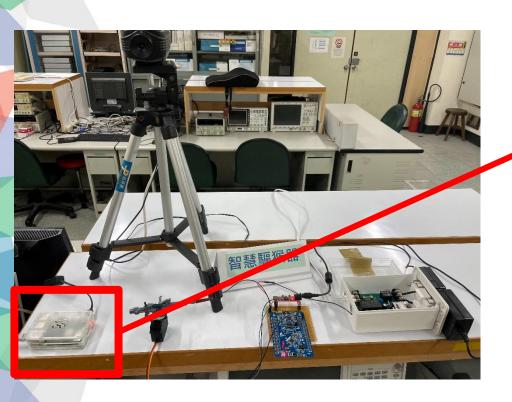

HT32(MCU)

功能:

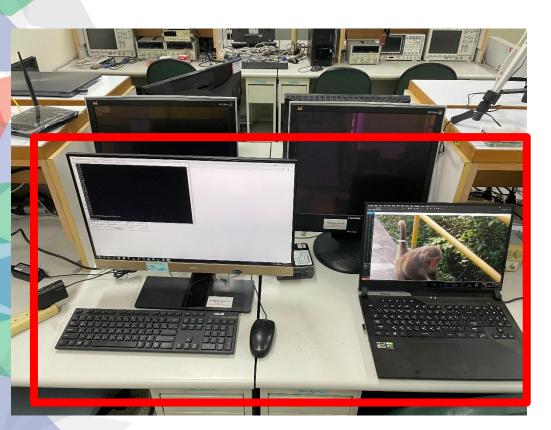

馬達控制 Modbus Slave

raspberry pi 4 功能: MQTT Broker

智能驅猴系統

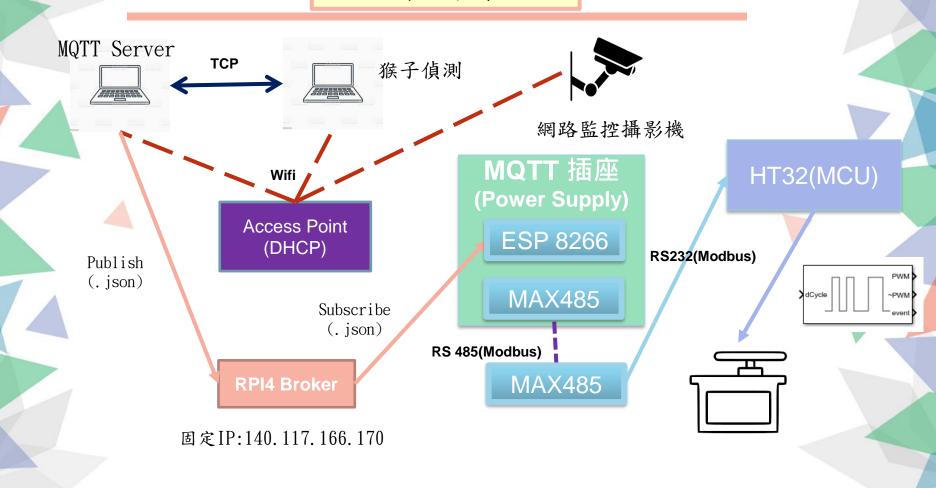

Yolov4視覺影像辨識平臺

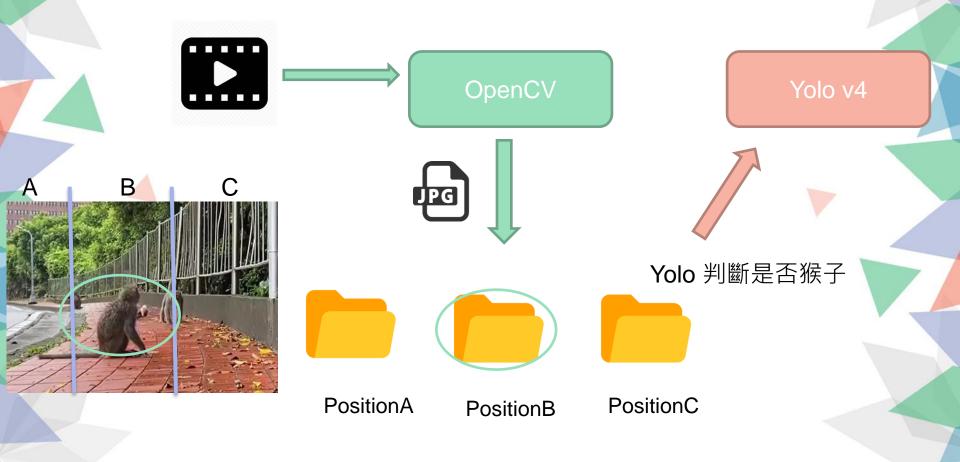

功能

辨識猴子(辨識率85%)
Yolov4 CNN
OpenCV
TCP輸出判斷結果
用MQTT協定發送(publish)指令封包

系統架構

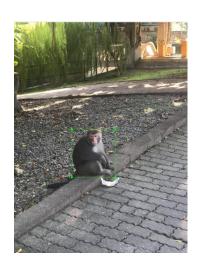

影像處理程式作法

訓練集跟驗證集的製作

- 實地尋找和拍攝猴子
- 將猴子的姿態分成4種(坐、站、跑、爬),拍攝20張以上
- 用了1000張訓練模型
- 標記訓練用照片時只框出猴子軀幹,不要框尾巴

OpenCV程式

Frame 2 (畫面)

Frame.....

1.調整大小(480*270)

2.灰階

3.模糊

背景5秒换一次

PositionA

PositionB

判斷大小為150*150以上

1.獲得目標框 2.計算框的 坐標和面積

PositionC

Yolo程式作法

PositionA

PositionB PositionC

A0.jpg

B0.jpg

A1.jpg

C1.jpg

B2.jpg

C2.jpg

匯入Position jpg檔

Yolo分析

用TCP輸出結果

PositionA

PositionC

PositionB

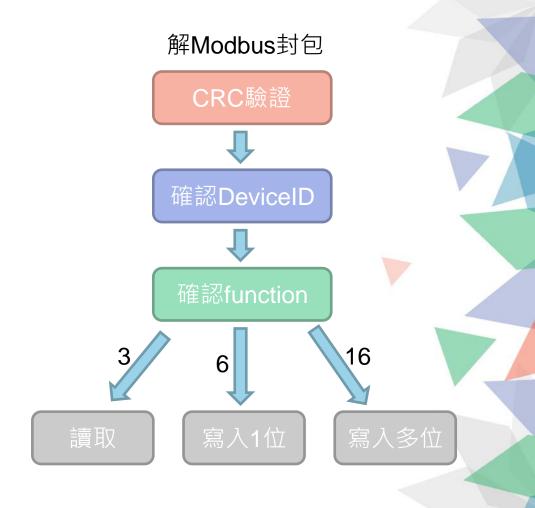

接收Modbus來修改 Holding Register的值

讀取Holding Register 中的數值

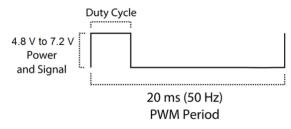

依據數值調整馬達角 度

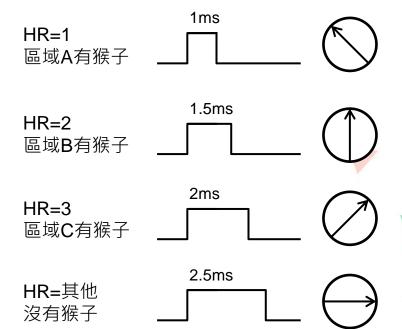

伺服馬達

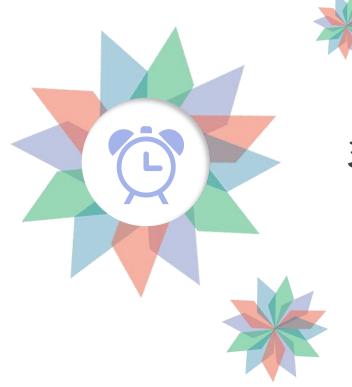

Control Signal

現場展示
